Uniform Heating Vacuum Sintering Furnace With Advanced Automation Control

Basic Information

Place of Origin: CHINABrand Name: OEM

Certification: CE Certification

Model Number: OEMMinimum Order Quantity: NegotiablePrice: Negotiable

Packaging Details: Carton, pallet, wooden case or according to

customer's package requirements

• Delivery Time: 30 working days

• Payment Terms: 30% deposit + 70% T/T before shipping

Supply Ability: 20 sets per month

Product Specification

Name: Vacuum Sintering Furnace

Heating: Uniform Heating
Power: 250/400/500/800
Heating Method: Resistance Heating

Rated Power Supply 380V

Voltage:

Control: Advanced Automation Control
 Highlight: vacuum tempering furnace,

high vacuum furnace

Product Description

Uniform Heating Vacuum Sintering Furnace With Advanced Automation Control

Vacuum Sintering Furnace Application:

Used for high temperature sintering of carbon fiber, carbon material, C/C composite material, metal powder products, photoelectric components, hard alloys, magnetic alloys, ceramic powder materials, and other materials, and has dewaxing function.

Vacuum Sintering Furnace Features:

Uniform heating, reliable insulation and temperature measurement;

Reasonable heating structure, high-quality materials to ensure uniformity of furnace temperature under vacuum;

The use of domestic and international brand temperature measuring components to ensure the accuracy of temperature measurement.

Vacuum Sintering Furnace applicability

Single chamber, vertical structure, compact and reasonable equipment layout, small footprint;

Advanced automatic control, comprehensive PLC water, electricity, gas automatic control and protection system, PLC realizes safety chain, with sound and light alarms such as over temperature, sensor break, water pressure, furnace overpressure, water flow, high water temperature; energy saving:

Resistive heating within 2000 °C, high temperature control accuracy, no noise, no pollution to the power grid, high energy utilization;

The low temperature section and the high temperature section are respectively controlled by different temperature control elements and automatically switched;

The high-temperature section is cooled by natural cooling, and the low-temperature section can be cooled by charging positive pressure inert gas.

Volume (L)	423	1250	2387	5086
Rated temperature (°C)	2000	2000	2000	2000
Limit temperature (°C)	2100	2100	2100	2100
Effective heating	Ф600Х150	Ф1000Х16	Ф1300Х18	Ф1800X2000
zone (mm)	0	00	00	
Power (KW)	250	400	500	800
Temperature control	Japanese island electric thermostat			
method				
heating method	Resistance heating			
Vacuum system	Spool valve vacuum pump + Roots vacuum pump (vacuum degree requirements			
	high with oil diffusion pump)			
Sintering atmosphere	N ² ,Ar ² and other gases			
Rated power supply	380			
voltage (V)				
Rated heating	According to the design, the pre-furnace transformer is configured.			
voltage (V)				
Vacuum limit (Pa)	6X10 ⁻² (vacuum cold state)
